

Thiomucase®

ANTICELULIT GEL

THIOMUCASE® ANTICELULIT GEL 200 ml

U ljudskoj prirodi je težnja ka perfekciji i to svakako nije fenomen. Vekovima ljudi pokušavaju da dostignu i da očuvaju lepotu. Nažalost, žene su predisponirane za stvaranje celulita. Celulit danas narušava lep spoljašnji izgled preko 80% žena.

Celulit kod žena počinje da se stvara od puberteta, postaje vidljiv kasnije i ima tendenciju da se pogoršava sa vremenom, čak i kod onih žena koje su vitke i u dobroj fizičkoj formi. Tipična mesta na kojima se javlja celulit su bokovi, butine, trbuh, mada se može javiti na nadiaktkicama i grudima.

Većina žena počinje da razmišlja o celulitu kada on postaje vidljiv ili bolan.

KAKO NASTAJE CELULIT

Savremena shvatanja nastanka celulita polaze od poremećaja strukture vezivnog tkiva u pojedinim delovima kože i vezivnim pragrađama između rešnjeva masnih ćelija (adipocita) u potkožnom masnom tkivu.

Kod žena sa nedovoljno čvrstom kolagenom mrežom, masno tkivo vrši pritisak i prodire u deo kože koji je označen kao dermis, a na površini kože se vide neestetske naslage koje zovemo: celulit ili "pomorandžina koža". Nevolje pospešuje i zadržavanje vode, pa tkivo postaje mekano, puno udubljenja i nabora. Ovakvo tkivo ima slabu cirkulaciju i neefikasnu eliminaciju toksina, čija se koncentracija u tkivu povećava. Na povećanje koncentracije toksina u visokom stepenu utiču i loše životne navike (ishrana, nedovoljna fizička aktivnost itd.)

Celulit nastaje u dugom vremenskom periodu i u dubljim slojevima kože, pa je za njegovu eliminaciju potrebno dosta strpljenja, truda i vremena. Thiomucase® gel sadrži enzim, mukopolisaharidazu (5000 T.J. –turbidimetrijske jedinice), čije je delovanje dokazano u kliničkoj praksi. Potkožno vezivno tkivo sačinjeno je od kolagena, elastina i osnovne supstance. Osnovna supstanca ili cementna supstanca je središte zadržavanja vode i mineralnih soli.

KAKO DELUJE THIOMUCASE®?

Thiomucase® ispoljava svoju funkciju, lečenj lokalne lipodistrofije tj. celulita, depolimerizacijom mukopolisaharida (dermatan sulfat i hialuronske kiseline), koje grade osnovnu supstancu. Pored toga, Thiomucase® reverzibilno razmekšava kolagen vezivnog tkiva. Tkivo postaje propustljivije za tečnosti i omogućava se lakša mobilizacija masti iz rezervi, kao i njihovo sagorevanje.

KAKO SE UPOTREBLJAVA THIOMUCASE® GEL?

Thiomucase® gel se nanosi na čistu i suhu kožu dva puta dnevno. Preporučuje se korišćenje Thiomucase® gela posle tuširanja toplom vodom radi boljeg prodiranja aktivnih materija kroz kožu. Thiomucase® gel se nanosi uz masazu koja potpomaže izbacivanje tečnosti iz tkiva i izlučivanje štetnih materija stimulacijom limfatičke venske cirkulacije.

REZULTATI PRIMENE THIOMUCASE®

Thiomucase® gel pokazuje dobre efekte kod svih oblika celulita. Čini kožu zategnutom i čvršćom što je dokazano dugogodišnjom upotrebom u "fitness" i "body building" salonima širom sveta, gde se Thiomucase® koristi kao sastavni deo fitness programa koji obezbeđuje odličan izgled kože. Radi postizanja bržih rezultata moguća je upotreba Thiomucase® gela i u kozmetičkim salonima.

Za postizanje maksimalnih rezultata potrebno je multidisciplinarno pristupiti problemu:

1. Thiomucase® gel - nanositi na celulitom zahvaćena mesta ujutru i uveče pred spavanje
2. pravilna i raznolika ishrana
3. unos vode (6-8 čaša dnevno)
4. prestanak pušenja
5. smanjenje stresa
6. smanjenje unosa soli
7. redovna fizička aktivnost
8. masaža
9. hipokalorijska detoksifikaciona dijeta (koja podrazumeva prekid uzimanja kofeina, gaziranih pića i alkohola, smanjen unos masti, šećera, soli i začina)

Thiomucase® gel se idealno uklapa u svakodnevnu negu tela; jednostavno se koristi, lako upija, neguje i održava vlažnost kože. Thiomucase® gel povećava elastičnost i tonus kože, povećava razmeru materija u potkožnom tkivu i prevenira stvaranje depozita masti.

Upotrebom Thiomucase® gela u okviru multidisciplinarnog pristupa lečenju celulita dobija se značajno smanjenje obima (bedra, butine, struk). Thiomucase® gel efikasno prevenira nastanak i redukuje postojeći celulit.

Pakovanje: 200 ml

ANTI CELLULITE GEL

THIOMUCASE® ANTI CELLULITE GEL

200 ml

Striving for perfection is in the human nature and it, certainly, does not represent a phenomenon. People have been trying to attend and perpetuate beauty for centuries. Unfortunately, women are predisposed to cellulite formation. Attractive appearance of more than 80% of women is nowadays being impaired by cellulite.

Cellulite formation in women commences in puberty, it becomes visible later and it has a tendency to aggravate over time, even in those women who are slim and in a good physical condition. Typical areas in which cellulite appears are the hips, thighs, stomach, but it can also appear on the upper arm and chest.

Majority of women starts thinking about cellulite only when it becomes visible or painful.

HOW CELLULITE IS FORMED?

Contemporary apprehension of cellulite formation is based on connective tissue structure disorder on the particular parts of the skin and connective partitions between fat cells (adipose cells) lobes in the subcutaneous fat tissue.

In women with insufficiently strong collagen network, fat tissue exerts pressure and penetrates the part of the skin which is designated as dermis, and unaesthetic layers called cellulite or "orange peels" are visible on this skin surface. Water retention promotes troubles, so that the tissue becomes soft, full of dimples and ripples. Such tissue is characterized by poor circulation and ineffective elimination of toxins, the concentration of which is increased in the tissue. Bad lifestyle habits (nutrition, insufficient physical activity, etc.) to a large degree influence the increase of toxins concentration.

Cellulite is formed over a long period of time and in deeper skin layers so that a lot of patience, effort and time are necessary for its elimination. Thiomucase® gel contains the enzyme mucopolysaccharidase (5000 T.U. – turbidimetric units), the action of which has been proven in clinical practice. Subcutaneous connective tissue is made of collagen, elastin and basic substance. Basic substance or cement substance is the center of water and mineral salts retention.

HOW THIOMUCASE® GEL WORKS?

Thiomucase® gel exercises its function, treatment of local lipodystrophy i.e. cellulite, by depolymerization of mucopolysaccharides (dermatan sulfate and hyaluronic acid), which buildup the basic substance. Besides that, Thiomucase® gel reversibly softens the connective tissue collagen. The tissue becomes more permeable for fluids and enables easier fats mobilization from the reserves, as well as their combustion.

HOW THIOMUCASE® GEL IS USED?

Thiomucase® gel is applied to clean and dry skin two times a day. Thiomucase® gel is recommended to be used after the shower with hot water for the purpose of better penetration of active substance through skin. Thiomucase® gel is applied while massaging which helps fluid elimination from the tissue and harmful matters excretion through the stimulation of lymphatic and vein circulation.

RESULTS

Thiomucase® gel demonstrates good effects in all forms of cellulite. It makes your skin tighter and stronger, which was proved by many-year application in fitness centers and gyms worldwide, where Thiomucase® is used as an integral part of the fitness program allowing you to achieve an excellent appearance of the skin. It is also possible to use Thiomucase® gel in cosmetic salons in order to achieve even better results.

For the purpose of achieving maximum results, a multidisciplinary approach to the problem is required:

1. Thiomucase® gel – topically, twice a day – in the morning and evening before sleep
2. regular and diverse nutrition
3. water intake (6-8 glasses a day)
4. smoking cessation
5. stress reduction
6. reduction of salt introduction
7. physical activity
8. massage
9. hypo caloric detoxifying diet (implying discontinuation of caffeine, carbonated beverages and alcohol intake, decreased intake of fat, sugar and spices)

Thiomucase® gel perfectly fits into every day care - it is easy to apply, quickly absorbed, nourishes skin and maintains its moisture. Thiomucase® gel increases the skin elasticity and tonus. It promotes exchange of matters in the subcutaneously tissue and prevents formations of fat deposits.

By applying Thiomucase® gel in the scope of the multidisciplinary approach to cellulite treatment, a significant volume reduction (hips, thighs, and waist) is obtained.

Thiomucase® gel effectively prevents the formation and reduces the existing cellulite.
